

St. Thomas Episcopal Church

Use: Multi-Purpose Meeting Room

Size: 48'x60'

Features:

* Clear Span design to allow unobstructed views * Double Steel Doors allowing easy access for large objects, large groups of people * Full-Size Kitchen * ADA handicapped restrooms * Shingled fascia * Duratemp, low maintenance exterior * Set at ground-level on foundation to avoid ramps & stairs

Background:

The church required a large meeting room that could be used for services, meetings, church events and classroom. The open floor plan allowed flexibility for multi-purpose uses. The bathrooms are located in the rear of the building to avoid interruptions during events. A full-size kitchen and utility room are designed to handle preparations for large dinners.

The red brick Duratemp exterior siding complements the red brick church next door. A stone retaining wall was added to give a courtyard effect and a smooth transition between buildings. The end walls were designed to allow the showing of films without additional equipment and the overhead lighting was wired to help customer control the lowering of lights from various areas of the building. An acoustical suspended ceiling was chosen to provide noise management and easy access for changing electrical, audio and lighting requirements as needed.
