

Project Profile | Anne Beers Elementary School

Use: Classroom Space
Location: Washington, DC
Size: (2) 24x40 Buildings

Need

Facing full occupancy, the elementary school required extra classroom space promptly. Opting for modular construction due to its rapid delivery, the school aimed not only to expand classroom capacity but also to provide overhead protection for students and staff against the elements.

Solution

Wilmot quickly delivered (2) 24 x 40 modular classrooms to accommodate the additional space required for students and staff. To seamlessly connect the existing campus to the new modular buildings, an aluminum canopy with custom footers was installed, ensuring the desired overhead protection against the weather for the school's students and staff.

Features

- VCT Flooring
- Tegular Ceiling Tile
- High Rib Steel Siding
- Large Aluminum Ramp & Canopy
- Custom Canopy Footers
