

Project Profile | Baltimore City Fire Department Training Academy

Use: Training Facility
Location: Baltimore City, MD
Size: (3) 24'x64'

Need

The BCFD Training Academy required immediate space for locker rooms, classrooms, and a training center. Additionally, one of the buildings needed to accommodate a driver simulator machine. The urgency stemmed from the lack of available space to adequately train cadets.

Solution

To address this pressing need, modular classrooms and locker room units were chosen. Three 24' x 60' modular buildings were custom designed and installed, providing versatile spaces that could serve as locker rooms, classrooms, and a training center. One of these units was specifically designed to house the driver simulator machine.

This modular solution allowed the Baltimore City Fire Department to quickly establish the required facilities, ensuring that cadets receive comprehensive training in a timely and efficient manner.
