

Project Profile | Security Building - Consol Energy Guard House

Use: Security Guard House

Location: N/A

Size: 12'x22' Permanent Building

Need:

The customer needed to replace the guard house they already had on site. They wanted the unit to be ground level, so we designed a foundation plan that would allow us to remove the hitch and axles and set the building into a concrete pit so the plumbing for the bathroom could also be hooked up.

Solution:

We constructed the building with security functionality in mind: oversized windows, LED Lights, High Rib-Steel and FRP as the interior wall covering for easy cleaning. The customer was delighted to say the least.

“

“The Wilmot building project was simply a joy realized. Surnamed ‘Elita’s She Shed,’ the building is a project revelation of smart engineering and modern design. Credit is due to the amazing service and materials provided by Wilmot Modular Structures in operation with Consol personnel.”

-Captain Elita Brice - Security Manager, Consol Energy

Features:

- Oversized Windows
- LED Lights
- High-Rib Steel
- FRP Interior Wall for Easy Cleaning
- Ground Level
