

Project Profile | Custom Modular Buildings - Office Space

Use: Class A Office and Meeting Space

Location: N/A

Size: Multiple Buildings – 17,280 Sq. Ft.

Need:

The customer needed office space for several years to support a large infrastructure project. It needed to be flexible as their space needs changed and they wanted to maximize the use of office space so it could house a large number of staff but still avoid the need for fire suppression.

Solution:

Wilmot Modular collaborated with the customer to configure a layout that incorporated a mixture of private offices, built-in workstations, conference rooms, ADA restrooms and other work areas to meet mission requirements. Cost savings were made for the customer by using an At Grade Foundation system for the building and special post anchors for the deck and ramp posts, saving time and money with less site disturbance. Wilmot helped the customer meet all ADA Code requirements with the additional benefit of maximizing the egress and ingress locations on the buildings which saved money by reducing the quantity of decks and ADA ramps.
