

Project Profile | Veterinary Clinic – Honeygo Animal Hospital

Use: Veterinary Clinic
Location: White Marsh, MD
Size: Approximately 3,440 Sq. Ft.

Need:

Prior to purchasing a modular building, the customer was operating in a strip mall-style space with an expensive monthly rent. The faster construction occurred, the shorter time she had to pay rent as well as construction loan payments.

Solution:

The interior layout was creatively designed to allow the staff to work as efficiently as possible. The design also removed the requirement for a fire suppression system which saved the owner over \$100K in additional costs. By redesigning the foundation and building to stay within the footprint of the previous building that was on site, Wilmot was able to save another \$200K in site costs as well as provide additional space for future growth.

Features:

- **2 Tone High Rib Steel Exterior Finish**
- **Reversed A-Gabled Front Porch w/Stone Accented Posts**
- **Countertops & Cabinetry added for pharmacy & workstations**
- **Private rooms sized for special cages to separate cats & dogs**
- **Strategically positioned access allowed separation between employees and customer area.**
