Proximity Malt Control Room - Laurel, DE

NEED

This customer needed a ground-level control room that could stand up to the rugged environment and be relocated as needed. They were very interested in using recycled materials as a key component to the building.

SOLUTION

A modified shipping container was repurposed to handle the Barley Lab, IT Server Room and central Control Room. The steel exterior offered durability and Low-E windows and LED Lights provided energy efficiency. Wood pallets and shipping crates were broken down and used for the interior wall finish and countertops.
