

USE: Office Space
LOCATION: Philadelphia, PA
SIZE: (3) Modules - 1,750 Sq. Ft.

Need

The customer needed additional space for their administration staff. They had very strict site requirements and the installation of the units was going to be challenging due to the site location behind other buildings and its odd shape. Custom requests from the customer included: natural light and an exterior finish that matched the existing buildings.

Solution

Wilmot Modular's experienced team of design professionals were able to plan and execute the challenging site installation. A crane was brought in to lift the three modules into position. Vinyl siding was chosen for the exterior to match the surrounding buildings as requested by the customer. Light tunnels were installed over all of the cubicles to provide natural light and reduce the number of electrical outlets installed in the building to reduce utility costs.

Features

- Vinyl siding, chosen to match the exterior of the surrounding buildings
- Light tunnels for natural light to save on utility costs
- Motion sensor lights
- Kitchenette
