

PROJECT PROFILE |

Classroom Space & Health Suite - Boys Latin School

USE: Classroom Space & Health Suite

LOCATION: Baltimore, MD

SIZE: (2) 24' x 40's

Need

The Boys Latin School of Baltimore, Maryland needed additional classroom space for social spacing due to the COVID-19 pandemic. It was their goal to remain open to continue providing quality in person learning, so having the flexible building space for social distancing was critical. Additionally, they wanted a separate building for their nurse's station so that any students with illness or suspected COVID-19 symptoms were not intermingling with students and staff in the main campus building.

Solution

Wilmot Modular quickly provided (2) 24x40 modular buildings (one classroom and one health suite) for The Boys Latin School so that social distancing measures could be put in to place immediately during the COVID-19 pandemic. The buildings were ready for occupancy in 30 days.

Features

- 2 (24 x 40) Modular Buildings
- LVCT Flooring
- CRVs (Commercial Room Ventilators) for healthier air circulation
- Aluminum Decks and Ramps
- Full Turnkey Project (ran all utilities for the school)
- Speed of Occupancy - 30 Days
- The health suite featured touchless bathroom features and private waiting rooms
