

# PROJECT PROFILE |

## Skanska USA - Custom Modular Building - Office Space

**USE:** Class A Office and Meeting Space  
**SIZE:** Multiple Buildings – 17,280 Sq. Ft.

### NEED

Skanska USA needed office space for several years to support a large infrastructure project. It needed to be flexible as their space needs changed and they wanted to maximize the use of office space so it could house a large number of staff but still avoid the need for fire suppression.

### SOLUTION

Wilmot Modular collaborated with Skanska USA to configure a layout that incorporated a mixture of private offices, built-in workstations, conference rooms, ADA restrooms and other work areas to meet mission requirements. Cost savings were made for Skanska USA by using an At Grade Foundation system for the building and special post anchors for the deck and ramp posts, saving time and money with less site disturbance. Wilmot helped Skanska USA meet all ADA Code requirements with the additional benefit of maximizing the egress and ingress locations on the buildings which saved money by reducing the quantity of decks and ADA ramps.
